WINE LABELLING WITH NUTRITION DECLARATION AND LIST OF INGREDIENTS

Consumers' perception, regulatory context & entry into force

23/06/2023

OEnoppia
Oenological Products and Practices
International Association

Stéphane LA GUERCHE
General Manager

OENOPPIA

Origin

- Created in **2009** by 9 founding members
- Companies specialised in oenological products which benefit from a recognised reputation either as a manufacturer or as a brand of oenological products.
- Main roles:
  - Offset the current lack of a representation integrating all of the oenological inputs.
  - Be involved in the considerations on the evolution of winemaking practices, providing both scientific knowledge and technical implementation.
  - Contribute to the dynamics of innovation, proposing new practices, for the continuous improvement of wine quality, ensuring the industrial feasibility of product specifications.

OENOPPIA

Members

- ADVISORY MEMBERS

  COFALEC (Confederation of European yeasts producers)
  ESO (Enological Supply Organization - USA)

OENOPPIA

Network/partnerships

- Observer member of:
  - OIV
  - CODEX ALIMENTARIUS
- Registered in the EU transparency register
- Strong interactions with several wine stakeholders

European Association of Wine Industry

Wine Industry Suppliers Association

SOME DEFINITIONS

INGREDIENTS: DEFINITIONS

CODEX ALIMENTARIUS
INTERNATIONAL FOOD STANDARDS
Food and Agriculture Organization of the United Nations
World Health Organization
OIV

- Ingredient means "**any substance, including a food additive**, used in the manufacture or preparation of a food and **present in the final product although possibly in a modified form**."
- Food Additive means "any substance not normally consumed as a food by itself and <u>used for a technological purpose</u> in the manufacture, processing, preparation, treatment, packing, packaging, transport or holding of such food, <u>resulting in it or its by-products becoming a component</u>.
- Processing Aid means "a substance not consumed as a food ingredient by itself and intentionally <u>used in the processing of raw materials, foods or its ingredients</u>, to fulfil a certain technological purpose and which may result in the <u>non- intentional but unavoidable presence of residues or derivatives in the final product</u>."

ADDITIVES USED IN OENOLOGY

Among 99 described compounds into the OIV International code of oenological practices, 23 are **authorized in the European Union as additives for winemaking** by the **Regulation (EU) 2019/934** as :

- Preservatives/Antioxidants
- Acidity regulators
- Stabilizers
- Packaging gases

Oenological products	Role
L-ascorbic acid	preservative
Sulfur dioxide	preservative
Potassium hydrogen sulfite	preservative
Potassium sulfite anhydrous	preservative
Potassium sorbate	preservative
Lysozyme	preservative
Dimethyldicarbonate (DMDC) *	preservative
Citric acid	acidity regulator
Malic acid (D,L-; L-)	acidity regulator
Lactic acid	acidity regulator
Tartaric acid (L(+)-)	acidity regulator
Calcium sulfate *(liqueur wines only)*	acidity regulator
Arabic gum	stabilizer
Metatartaric acid	stabilizer
Yeast mannoproteins	stabilizer
Carboxymethylcellulose	stabilizer
Potassium polyaspartate	stabilizer
Fumaric acid	stabilizer
Argon	packaging gas
Nitrogen	packaging gas
Carbon dioxide	packaging gas
Aleppo pine resin *(retsina wines only)*	other
Caramel *(special wines only)*	other

* DMDC is a special case regarding the labelling exemption in article 20 b) of Regulation (EU) N° 1169/2011 of additives used as processing aids; please contact your LANXESS distributor for more information.

CONSUMER'S PERCEPTION

CONSUMERS' PERCEPTION?

- To understand the **impact of ingredient list labelling on the wine sector**, OENOPPIA launched a consumer survey in 2021.
- **Four specific objectives** have been assigned:

  1. Assess consumers' perceptions and knowledge of winemaking practices,
  2. Assess the impact of labelling ingredients on purchase consideration and imagery of a tried and liked wine and on an unknown wine,
  3. Assess the impact of two levels of information: a short list vs a long of ingredients,
  4. Assess the level of consumer acceptance for specific ingredients.

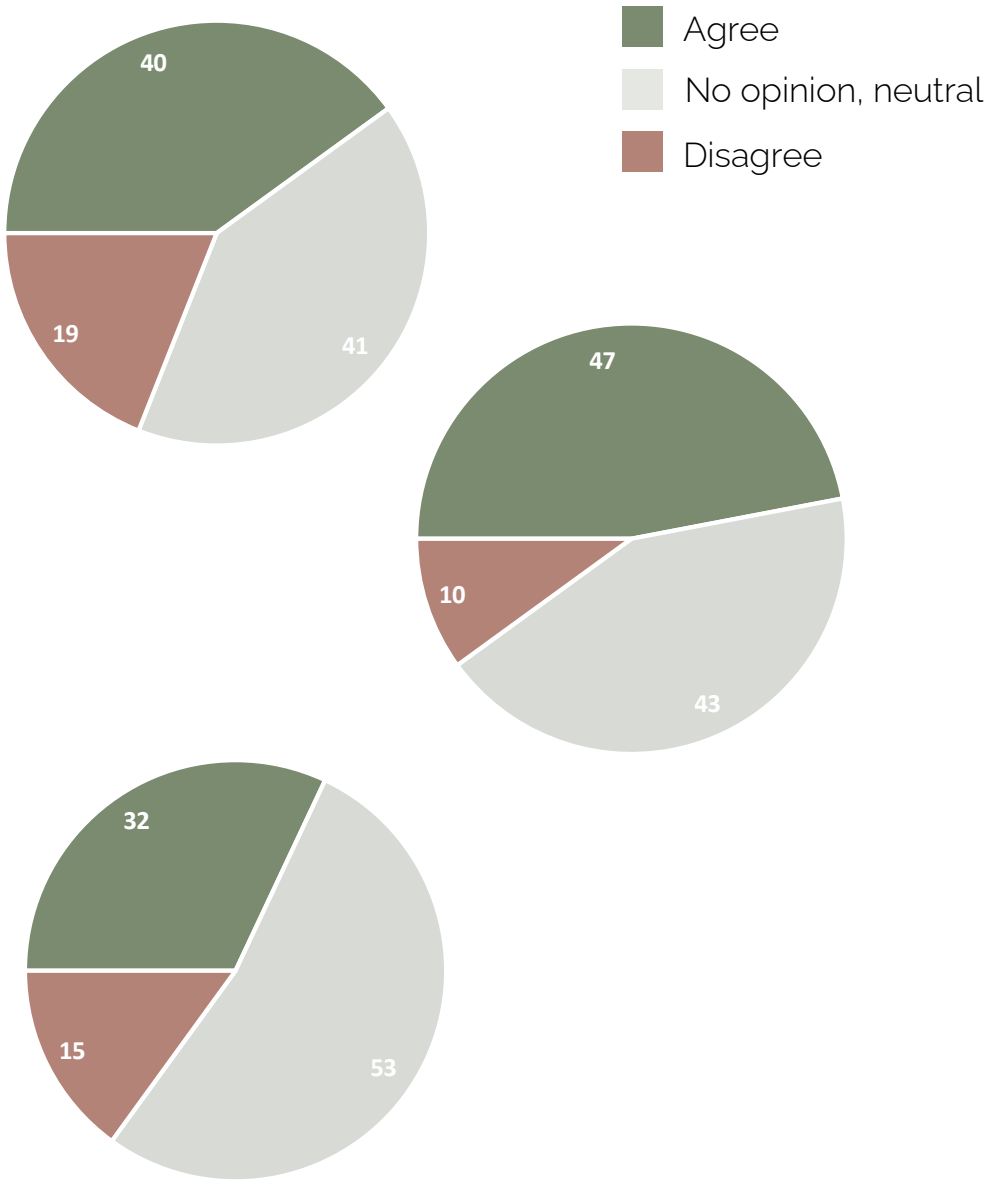
SURVEY'S METHODOLOGY

- Consumer survey realized by Wine Intelligence, via **Vinitrac®** omnibus survey platform

  - **Online**, with 8 séries of questions
  - **10 markets** :
    Germany, France, Spain, Italy,
    United Kingdom, Sweden, Russia, Japan,
    Australia and USA
  - Men and women evenly distributed in the ten countries, over different age groups, who drink wine at least once a month.

⇨ 11,533 wine consumers surveyed, representative of the **262 million wine consumers in the 10 targeted markets**.

WINEMAKING PERCEPTIONS & KNOWLEDGE



PRESENCE OF ADDITIVES

Wine is a natural product, free of additives

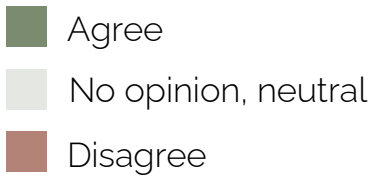
Most wines contain additives

USEFULNESS OF ADDITIVES

When making wine, using **additives** (including preservatives) helps ensure the wine's quality and integrity

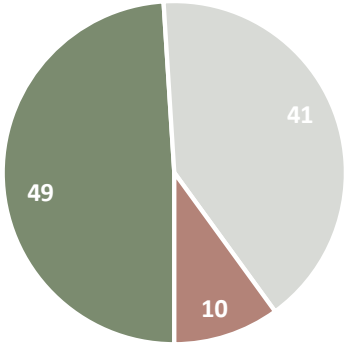
OEnoppia Oenological Products and Practices International Association

WINEMAKING PERCEPTIONS & KNOWLEDGE

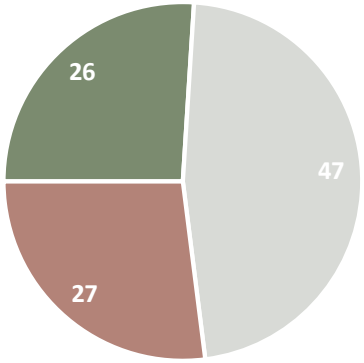


ADDITIVES & PERCEIVED QUALITY

High quality wine producers don't need to use additives

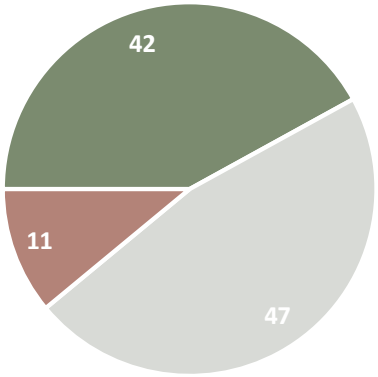


Only poor quality wines contain additives



ADDITIVES & HEALTH CONCERNS

A wine containing additives is not good for my health



IMPACT OF WINE INGREDIENTS LABELLING
ON A TRIED AND LIKED WINE

Respondents are informed that the back label exhibits the wine's ingredients.
Each respondent has been randomly assigned to one of the three following scenarios:

Scenario 1 (≈1/3 of respondents)	Scenario 2 (≈1/3 of respondents)	Scenario 3 (≈1/3 of respondents)
"Contains sulfites"	Short list of ingredients "Ingredients: grape 99%, preservative (sulfites), antioxidant (L-ascorbic acid)"	Long list of ingredients "Ingredients: grape 99%, preservative (sulfites), antioxidant (tannins, L-ascorbic acid), acidity regulator (calcium sulphate), stabilizer (metatartaric acid, yeast mannoproteins)"

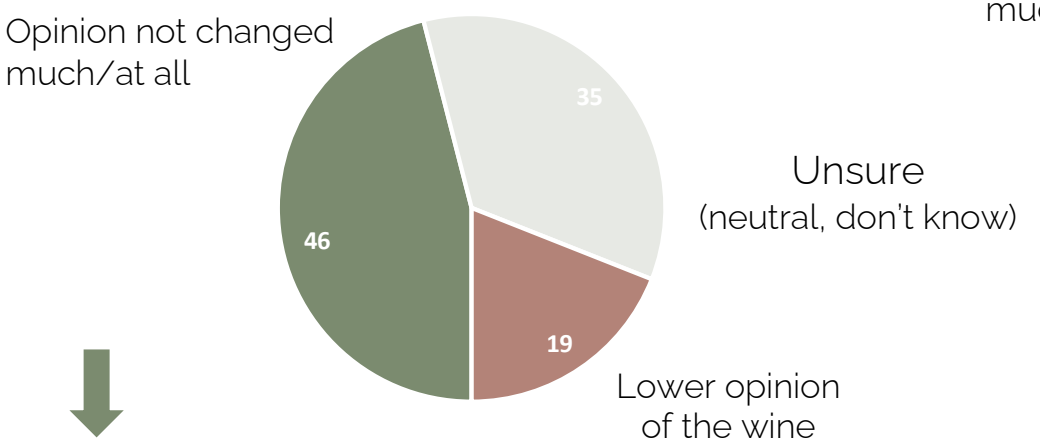
Questions

- Does it change your opinion about the wine?
- Does it influence your intent to buy?

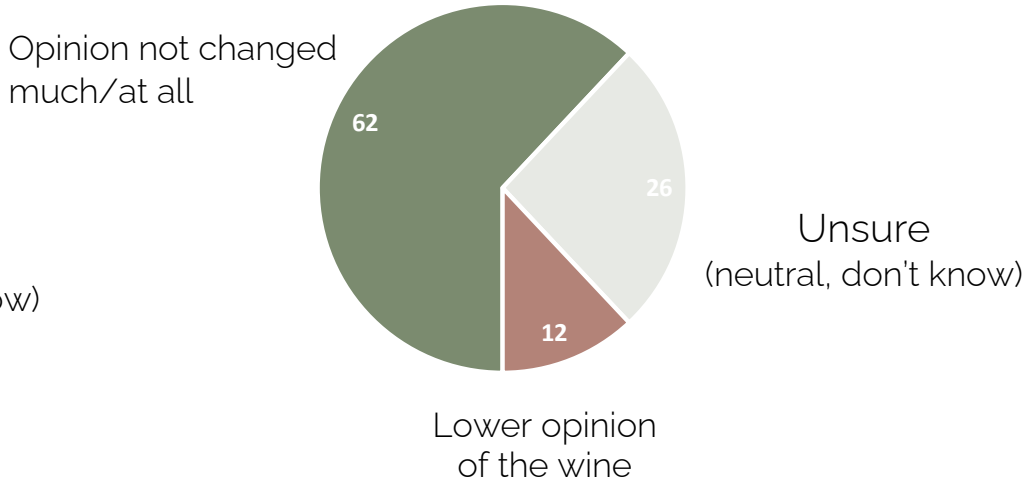
IMPACT OF WINE INGREDIENTS LABELLING
ON A TRIED AND LIKED WINE

Average 3 scenarios

Opinion about the wine



Intent to buy the wine



Results by scenario

	Average ✓	Contains sulfites	Short list	Long list
% No, it doesn't change my opinion much/at all	46%	42%	51%	45%
% I would probably/definitively buy it again	62%	58%	67%	62%

Significantly higher / lower than « Average across the 3 lists » (confidence interval: 95%)

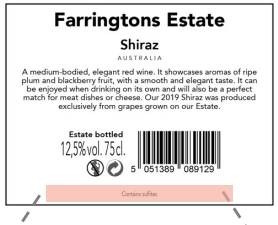
OEnoppia Oenological Products and Practices International Association

IMPACT OF WINE INGREDIENTS LABELLING ON A NEW WINE

Respondents imagine that they are in a shop and that they spot a wine that seems to match the type of wine they like to drink.
Each respondent was randomly assigned to 1 of the 3 possible scenarios of back labels:

Scenario 1
(≈1/3 of respondents)

"Contains sulfites"



"Contains sulfites"

Scenario 2
(≈1/3 of respondents)

Short list of ingredients

"Ingredients: grape 99%, preservative (sulfites), antioxidant (L-ascorbic acid)"

Scenario 3
(≈1/3 of respondents)

Long list of ingredients

"Ingrédients: grape 99%, preservative (sulfites), antioxidant (tannins, L-ascorbic acid), acidity regulator (calcium sulphate), stabilizer (metatartaric acid, yeast mannoproteins)"

Each respondent was shown either a **white** wine (≈50% of respondents) or a **red** wine (≈50% of respondents) back label.

OEnoppia
Oenological Products and Practices
International Association

IMPACT OF WINE INGREDIENTS LABELLING ON A NEW WINE

Question: To what extent would you consider buying this wine?

	I would consider/strongly consider buying it		
	Contains sulfites	Short list	Long list
Average all markets	47%	+2 pts	-1 pt
France	37%	+8 pts	+7 tps
Australia	47%	+5 pts	+6 pts
Spain	51%	+9 pts	+1 pt
United Kingdom	52%	+5 pts	+2 pts
Germany	48%	-1 pt	+1 pt
USA	53%	+1 pt	-1 pt
Sweden	45%	+1 pt	-3 pts
Russia	37%	+2 pts	-5 pts
Italy	50%	-2 pts	-5 pts
Japan	46%	-7 pts	-11 pts

Significantly higher / lower than "Contains sulfites" (confidence interval: 95%)

Findings showing or suggesting …

✓ Positive impact for both a **short** and a **long** lists.

✓ Positive impact of a **short** list.

× Negative impact of a **long** list.

× Negative impact for both a **short** and a **long** lists.

Focus on sparkling wines:

In several markets (Russia, USA, France), shifting from 'contains sulfites' to a short list of ingredients yields consumers to be more likely to consider buying an unknown sparkling wine.

OEnoppia Oenological Products and Practices International Association

WINE INGREDIENTS ACCEPTANCE

Respondents imagine that they are in a shop and that they spot a wine that seems to match the type of wine they like to drink.
Each respondent was randomly assigned to 1 of the 2 possible scenarios:

Scenario 1

(≈50% of respondents)

List of ingredients,
with **no information**.

- L-ascorbic acid
- Potassium sorbate
- Dimethyldicarbonate (DMDC)
- Tartaric acid
- Malic acid
- Lactic acid
- Calcium sulphate
- Citric acid
- Tannins
- Arabic gum
- Metatartaric acid
- Yeast mannoproteins
- Carboxymethylcellulose
- Potassium polyaspartate

Scenario 2

(≈ 50% of respondents)

List of ingredients,
with a **short explanation**.

Ingredients used to better preserve the wine:

- L-ascorbic acid
- Potassium sorbate
- Dimethyldicarbonate (DMDC)

Ingredients used to better maintain the quality of the wine (stabilise it and/or regulate its level of acidity):

- Tartaric acid
- Malic acid
- Lactic acid
- Calcium sulphate
- Citric acid
- Tannins
- Arabic gum
- Metatartaric acid
- Yeast mannoproteins
- Carboxymethylcellulose
- Potassium polyaspartate

WINE INGREDIENTS ACCEPTANCE WITHOUT INFORMATION

Question: For each of these ingredients, what would your reaction be?

Oenological Products and Practices
International Association

SURVEY'S CONCLUSIONS

- The most common view towards ingredients labelling is **uncertainty**, far more so than outright rejection. Reassuring consumers on both **quality** of the wine and impact on **health** are two key points to consider.
- A **short list of ingredients** is preferable to a long one.
  The former often has a neutral impact on both consideration to buy and imagery. The longer one is more likely to harm imagery, up to a strong negative impact.
- Findings suggest that consumers are more likely to **accept** rather than reject **most ingredients**. However, those with the most complicated and 'chemical sounding' names are less likely to be accepted.
- A **short explanation** of why an ingredient is used will often yield a significant increase in acceptance.

REGULATORY CONTEXT

REGULATORY CONTEXT

- Regulation (EU) 2021/2117 adopted in December 2021 by the European Commission within the CAP reform making mandatory the **communication of the nutrition declaration and the list of ingredients for wines and aromatized wines**.
- **Delegated act amending Regulation (EU) 2019/33** on the labelling rules defined by the European Commission to be **adopted on the 30th of May 2023**.
- Entry into application of the Regulation on **December 8th 2023**, with the possibility to give this information on-line by electronic means (= ***e-labelling***).
- The European regulation will impact **all the wines commercialized on EU market**.

⇨ *The problematic is therefore global!*

NUTRITION DECLARATION

- On label, content limited to the **energy value**, which may be expressed by using the symbol "E" (for energy), in **kJ and kcal per 100 mL**.

- By electronic means, **full nutrition declaration** indicating the amounts of fat, saturates, carbohydrate, sugars, protein and salt.

The energy value shall be calculated using the conversion factors listed in Annex XIV of Regulation (EU) 1169/2011, or using average values generally established and accepted by the sector.

	Value /100 mL
Energy	XXX KJ / XXX Kcal
Fat	g
of which saturates	g
Carbohydrate	g
of which sugars	g
Proteins	g
Salt	g

INGREDIENTS TO LIST?

- The list of ingredients will mention:
  - **Grape**
  - **Sucrose** or **concentrated grape must**
  - **Additives associated to their technological role**,

    as defined in Regulation (EU) 2019/934
- Ingredients shall be listed in descending order of weight when representing 2% or more of the finished product; those constituting less than 2 % may be listed in a different order after the other ingredients.
- Any processing aid causing allergies or intolerance should be indicated **in bold** in the list of ingredients.
- Additives used for stabilization purposes and/or to facilitate the implementation of processing aids are **not subject to labelling**

⇨ *This new information is added to mandatory information already present on the label; <u>it does not replace it</u>!*

INGREDIENTS TO LIST?

- Exceptions
  - **Additives under the number E220-228 INS** could be grouped together and **replaced by the term "preservatives (sulfites)"**.
  - For **sparkling wines**, the terms **"tirage liqueur"** and **"expedition liqueur"** could be referred in the list of ingredients, either alone or followed by their actual constituents.
  - **Packaging gases** (carbon dioxide, argon and nitrogen) may be replaced by **"bottled in a protective atmosphere"** or **"bottling may happen in a protective atmosphere"**.
  - **Acidity regulators and stabilising agents** could be listed with **"contain"** followed with an exhaustive list of possible alternative substances.

WINES TO LABEL?

- According to Regulation (EU) 2021/2117, only **wines produced and labelled** before the 8th of December 2023 may be exempted.
- Wines produced **and/or labelled** after the 8th of December 2023 may present:
  - A document detailing the list of ingredients for **grapevine products transported in bulk**,
  - The list of ingredients on back label or using electronic labelling for **bottled wines**.

⇨ *Discussion underway at the European level to consider the **exemption of all wines produced before 08/12/23**, modifying "wines produced and labelled" to "wines produced" in Regulation (EU) 2021/2117.*

HOW TO LABEL?

- Example of a list of ingredients

> Ingredients: grape, sucrose, preservative (**sulfites**), acidity regulator (L-tartaric acid), antioxidant (L-ascorbic acid), stabilizer (Arabic gum, carboxymethylcellulose)

- The list of ingredients may be mentioned:
  - On back label
  - Using electronic labelling:
    - Avoiding any collection or tracking of user data
    - Dissociating this list from any other information for marketing purposes

E-LABELLING

Presentation

- Several platforms are available or in development
- European wine sector* has been a forerunner in supporting the development and launch of U-LABEL platform in December 2021

u-label Digital information

www.u-label.com

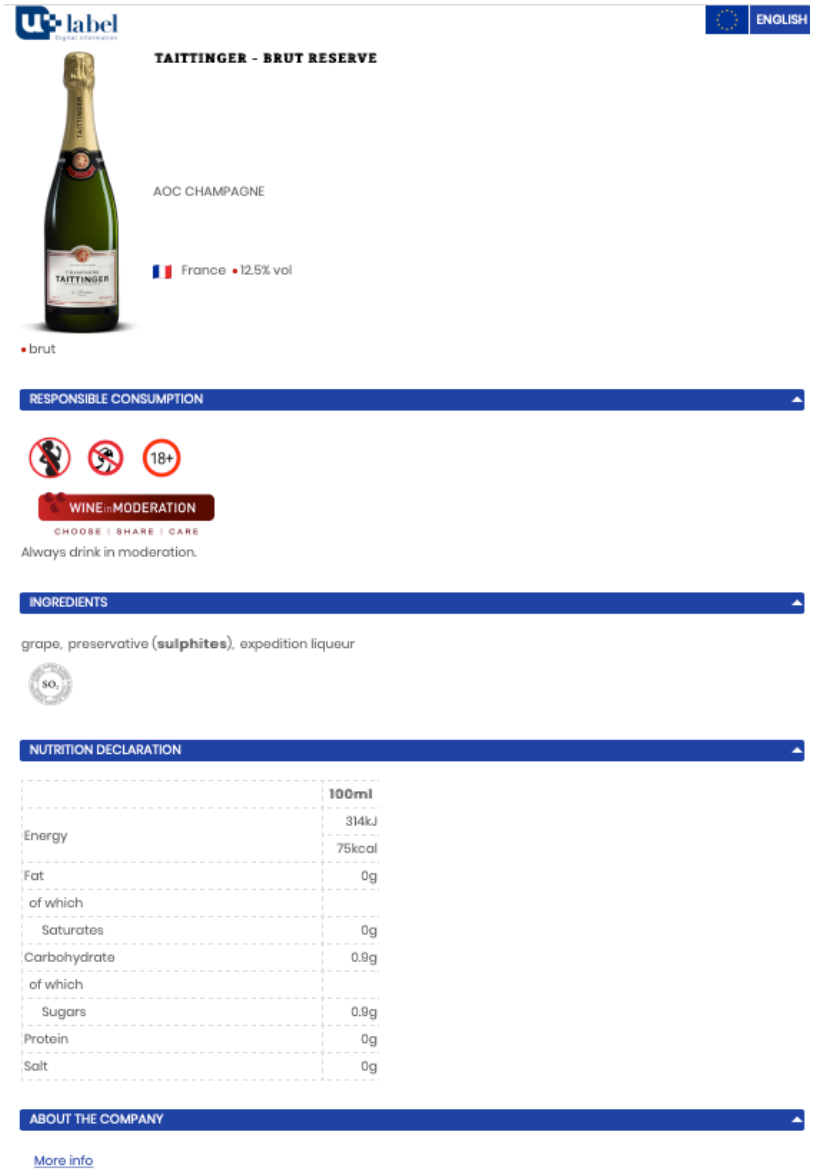
* ceev Comité Européen des Entreprises Vins & spirits EUROPE

OEnoppia Oenological Products and Practices International Association

U-LABEL

Principle

- E-label created in one of the 24 languages of the European Union
- Information **to be added** on the e-label:
  - Identification of the product
  - Responsible consumption logos
  - List of ingredients
  - Nutrition declaration
- Information **that may be added** on the e-label:
  - Information on responsible consumption
  - Sustainability
  - Link to company website



U-LABEL

Benefits

- Solution adapted to wines, aromatised wines and spirits,
- Information always compliant with EU regulatory requirements, with an associated monitoring,
- Tool easy to use thanks to drop-down lists for each field to be filled in,
- Choice of languages available via the platform,
- Automatic translation in the 24 official EU languages.
